Michael Edwin Panama

AI Data Annotation and Model Evaluation Specialist

michaeledwinpanama@gmail.com | Portfolio: eazyvibez25-ux.github.io
linkedin.com/in/edwin-michael-748159417 | github.com/ediboy-dev

Professional Summary

Computer Science graduate focused on the human side of AI. I write and test prompts, evaluate model outputs against clear rubrics, and label data with close attention to accuracy and consistency. Certified by Mercor in AI agent evaluation, with hands-on experience building and deploying full-stack web applications. Fast learner who works well remotely and independently.

Core Skills

AI Training & Evaluation	Prompt engineering, LLM output evaluation, AI model assessment, AI agent evaluation, instruction following, quality evaluation
Data Annotation	Visual data labelling, object identification, bounding-box annotation, image review, dataset quality checks
Rubrics & QA	Rubric design, pass/fail criteria, error identification, output grading, structured feedback, consistency checks
Prompt & Task Design	Real-world task creation, manager-to-worker task simulation, prompt development, workflow design
Software Development	React, Node.js/Express, MongoDB, REST APIs, JWT authentication, WordPress, SEO fundamentals, deployment on Render
Technical QA & Support	Functional and feature testing, bug reporting, technical documentation, user guides, troubleshooting, remote support
Professional	Attention to detail, written communication, time management, adaptability, teamwork, independent remote work

Experience

AI Training, Evaluation & Data Annotation

Self-directed, Remote

- Wrote and tested prompts to check how AI models follow instructions, handle edge cases and stay accurate.
- Evaluated AI outputs against rubrics with clear pass/fail criteria, and gave structured written feedback.
- Labelled and reviewed image data, including object identification and bounding-box annotation, with quality checks on each batch.
- Designed realistic tasks and instructions that simulate how a manager briefs a worker, to test AI performance on real-world work.
- Provided technical support, troubleshooting and step-by-step user guides.

Projects

SmartEduTrack: QR Code & Geofencing Attendance System

October 2026 | Live demo

- Built a full-stack attendance system with React, Node.js/Express and MongoDB, using dynamic QR codes and GPS geofencing to confirm students are in class.
- Added JWT login with three roles (student, lecturer, administrator), offline attendance capture that syncs once back online, and attendance analytics.
- Tested the backend end to end with Postman and deployed the system live on Render.

Education

BSc Computer Science
University of Port Harcourt
Graduated September 2026

Final year project: SmartEduTrack, a QR code and geofencing attendance system.

Certifications

Introduction to Agents, Mercor
November 2026 | Verify

Mastering Model Mechanics, Mercor
November 2026 | Verify
